**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of group I, claims 77-145 in the reply filed on Oct. 03, 2008 is acknowledged.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 77-145 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Battilani (7,025,582).

Battilani teaches a molding apparatus, comprising a carousel (1) with a supporting drum (2), a plurality of molding units including upper punch (3) and lower mold (4), a dose delivering head (6) for depositing the plastic dose (D) in the mold cavity, two pairs of levers (18-21)

pivoted on diametrically opposite sides of the mold (4) by means of threaded pivots (22-25) that allow oscillation of the levers, wherein top of the levers are connected by two mutually parallel rods (26, 27) that are positioned above and outside of the mold cavity (5) when the punch and the mold are in a closed position.

Wherein the rods (26, 27) are oscillating toward and away from each other on top of the mold cavity for supporting and depositing the dose (D) onto the mold cavity (5), wherein the movements of the rods (26, 27) and the levers (18-21) are controlled by a cam (32) that is fixed to the drum (2), which is fixed to the carousel (1) and connected to the punch (3) and the cavity mold (5).

Battilani further discloses that the dose delivering head (6) is configured to deliver the plastic dose (D) onto the rods when the punch and the mold are in the open position (Fig. 5-7, D), and that the levers (18-21) are substantially L-shaped (see Fig. 2).
